The applicant requests a five-year permit to conduct research on sea turtles bycaught in three longline fisheries in the Pacific Ocean around Hawaii and American Samoa to assess sea turtle post-hooking survival, movements, and ecology in pelagic habitats. Researchers would photograph, measure, biopsy sample, and flipper tag sea turtles prior to release and collect carcasses, tissues and parts from dead sea turtles. A subset of loggerhead and leatherback sea

turtles also may receive a satellite transmitter before release. Take numbers for these activities would be consistent with the number of turtle captures analyzed in the incidental take statement of the biological opinion prepared for each fishery.
